

Cells, Tissues, and Organs, Oh My!

Cells like me are the basic building blocks of life! Human bodies have more than 10 trillion cells!

When cells work together, they form tissues. When tissues work together, they form organs. Each organ has a special job in the body. When organs work together, they form systems of closely related jobs.

Cells, tissues, organs, and systems all have individual jobs but also work together to perform all the tasks your body needs!

Directions: **A.** Name 3 organelles found within human body cells. **B.** Name the 4 kinds of tissue in the human body. **C.** Name 10 organs found in the human body. **D.** Name 5 body systems.

A. Name 3 organelles found within human body cells.

1. _____ 2. _____ 3. _____

B. Name the 4 kinds of tissue in the human body.

1. _____ 2. _____
3. _____ 4. _____

C. Name 10 organs found in the human body.

1. _____ 2. _____ 3. _____
4. _____ 5. _____ 6. _____
7. _____ 8. _____ 9. _____
10. _____

D. Name 5 body systems.

1. _____ 2. _____ 3. _____
4. _____ 5. _____
